About

I am passionate about identifying the key value proposition and understanding the most pressing challenges faced by customers. By collaborating closely with all stakeholders, I design solutions that address these needs. Through pragmatic approaches and incremental improvements, I achieve measurable results.

Summary

Experienced Technical Project Manager and Software Architect with over 15 years of expertise in developing scalable software solutions. Specialized in requirements engineering, solution architecture, and stakeholder management, with a strong technical background in software architectures, systems integration, cloud computing, and the Microsoft .NET stack. Proven ability to lead software projects from inception to delivery while effectively managing quality, risks, and stakeholder expectations.

Key Skills

- Technical project management, business analysis, requirements engineering, solution design
- Domain expertise: ERP (Logistics/Manufacturing/Commerce), CRM, Insurance, Health
- Technologies: Microsoft Stack (C#/.NET/Core, SQL Server), LDAP, Transact-SQL (T-SQL), REST APIs
- Automation & Integration: PowerShell, WCF, RabbitMQ, Event streaming/processing
- Cloud & DevOps: Azure, GCP, AWS, GitHub, Jira
